Low Voltage Quad 2-Input **NAND Schmitt Trigger**

74LVX132

General Description

The LVX132 contains four 2-input NAND Schmitt Trigger Gates. The pin configuration and function are the same as the LVX00 but the inputs have hysteresis between the positive-going and negative-going input thresholds, which are capable of transforming slowly changing input signals into sharply defined, jitter-free output signals, thus providing greater noise margins than conventional gates.

The inputs tolerate voltages up to 6.5 V allowing the interface of 5 V systems to 3 V systems.

Features

- Input Voltage Level Translation from 5 V to 3 V
- Ideal for Low Power/Low Noise 3.3 V Applications
- Guaranteed Simultaneous Switching Noise Level and Dynamic Threshold Performance
- Pb-Free, Halogen Free/BFR Free and RoHS Compliant
