

FAN6250M6X

Secondary Side Synchronous Rectifier Controller for Flyback Converters

Description

The FAN6250M6X is a secondary-side synchronous rectifier (SR) controller for an isolated flyback converter operating in Discontinuous Conduction Mode (DCM). The adaptive dead time control algorithm minimizes the body diode conduction of SR MOSFET while guaranteeing stable and robust SR operation against noise and disturbance caused by the circuit parasitic.

Programmable thermal Shut-Down (SD) function that is informing primary side controller to shut-down the power system when pairing with PSR controller – FAN1080. The Dynamic Response Enhancement (DRE) function that minimizes system response time when pairing with PSR controller – FAN1080.

Features

- Works in Discontinuous Conduction Modes (DCM) and Boundary Conduction Modes (BCM)
- Adaptive Turn-off Trigger Blanking Time for Wide SR MOSFET Application
- Gate Turn-on Blanking Time (minimum Gate OFF Time)
- Dynamic Response Enhancement (DRE) Function that minimizes System Response Time
- Programmable Shut-Down (SD) Protection
- Minimum Turn-on Delay (20 ns)
- Input Voltage (VIN) Range for LDO Input: 3.25 V to 20 V
- Fewest External Components Allowed
- Accurate Turn Off Dead Time Regulation when working with PSR Power System
