

NCP5351

4 A Synchronous Buck Power MOSFET Driver

The NCP5351 is a dual MOSFET gate driver optimized to drive the gates of both high-side and low-side Power MOSFETs in a Synchronous Buck converter. The NCP5351 is an excellent companion to multiphase controllers that do not have integrated gate drivers, such as ON Semiconductor's CS5323, CS5305 or CS5307. This architecture provides a power supply designer the flexibility to locate the gate drivers close to the MOSFETs.

The 4.0 A drive capability makes the NCP5351 ideal for minimizing switching losses in MOSFETs with large input capacitance. Optimized internal, adaptive nonoverlap circuitry further reduces switching losses by preventing simultaneous conduction of both MOSFETs.

The floating top driver design can accommodate MOSFET drain voltages as high as 25 V. Both gate outputs can be driven low, and supply current reduced to less than 25 μ A, by applying a low logic level to the Enable (EN) pin. An undervoltage lockout function ensures that both driver outputs are low when the supply voltage is low, and a thermal shutdown function provides the IC with overtemperature protection.

The NCP5351 is pin-to-pin compatible with the SC1205 and is available in a standard SO-8 package and thermally enhanced DFN10.

Features

- 4.0 A Peak Drive Current
- Rise and Fall Times < 15 ns Typical into 6000 pF
- Propagation Delay from Inputs to Outputs < 20 ns
- Adaptive Nonoverlap Time Optimized for Large Power MOSFETs
- Floating Top Driver Accommodates Applications Up to 25 V
- Undervoltage Lockout to Prevent Switching when the Input Voltage is Low
- Thermal Shutdown Protection Against Overtemperature
- < 1.0 mA Quiescent Current – Enabled
- 25 μ A Quiescent Current – Disabled
- Internal TG to DRN Pulldown Resistor Prevents HV Supply-Induced Turn On of High-Side MOSFET
- Pb-Free Package is Available

NCP5351

PACKAGE PIN DESCRIPTION

Pin Number		Pin Symbol	Description
SO-8	DFN-10		
1	1	DRN	The switching node common to the high and low-side FETs. The high-side (TG) driver and supply (BST) are referenced to this pin.
2	2	TG	Driver output to the high-side MOSFET gate.
3	4	BST	Bootstrap supply voltage input. In conjunction with a Schottky diode to V_S , a 0.1 μF to 1.0 μF ceramic capacitor connected between BST and DRN develops supply voltage for the high-side driver (TG).
4	5	CO	Logic level control input produces complementary output states – no inversion at TG; inversion at BG.
–	3, 8	N/C	Not Connected.
5	6	EN	Logic level enable input forces TG and BG low, and supply current to 10 μA when EN is low.
6	7	V_S	Power supply input. A 0.1 μF to 1.0 μF ceramic capacitor should be connected from this pin to PGND.
7	9	BG	Driver output to the low-side (synchronous rectifier) MOSFET gate.
8	–	PGND	Ground.
–	10	GND	Ground.

V_S Falling	$V_{\text{EN}} = V_S$, $\text{CO} = 0\text{ V}$, $dV_S/dt < -1.0\text{ V}/\mu\text{s}$, from 4.5 V to 4.0 V , time to $\text{BG} < 1.0\text{ V}$, $T_J = 125^{\circ}\text{C}$	–	500	–	μs

NCP5351

Figure 3. Application Diagram

APPLICATIONS INFORMATION

Theory Of Operation

Enable Pin

The Enable Pin (EN) is controlled by a logic level input. With a logic level high on the EN pin, the output states of the drivers are controlled by applying a logic level voltage to the CO pin. With a logic level low both gates are forced low. By bringing both gates low when disabling, the output voltage is prevented from ringing below ground, which could potentially cause damage to the microprocessor or the device being powered.

Undervoltage Lockout

The TG and BG are held low until V_S reaches 4.25 V during startup. The CO pin takes control of the gates' states when the V_S threshold is exceeded. If V_S decreases 300 mV below threshold, the output gate will be forced low and remain low until V_S rises above startup threshold.

Adaptive Nonoverlap

The Adaptive Nonoverlap prevents a condition where the top and bottom MOSFETs conduct at the same time and short the input supply. When the top MOSFET is turning off,

the drain (switch node) is sampled and the BG is disabled for a fixed delay time ($tpdh_{BG}$) after the drain drops below 4 V, thus eliminating the possibility of shoot-through. When the bottom MOSFET is turning off, TG is disabled for a fixed delay ($tpdh_{TG}$) after BG drops below 2.0 V. (See Figure 2 for complete timing information).

Layout Guidelines

When designing any switching regulator, the layout is very important for proper operation. The designer should follow some simple layout guidelines when incorporating gate drivers in their designs. Gate drives experience high di/dt during switching and the inductance of gate drive traces should be minimized. Gate drive traces should be kept as short and wide as practical and should have a return path directly below the gate trace. The use of a ground plane is a desirable way to return ground signals. Also, component location will make a difference. The boost and the V_S capacitor are the most critical and should be placed as close as possible to the driver IC pins, as shown in Figure 4(a), C21 and C17.

 3. SOURCE (P)
 4. GATE (P)
 5. DRAIN
 6. DRAIN
 7. DRAIN
 8. DRAIN</p> |
| <p>STYLE 21:
 PIN 1. CATHODE 1
 2. CATHODE 2
 3. CATHODE 3
 4. CATHODE 4
 5. CATHODE 5
 6. COMMON ANODE
 7. COMMON ANODE
 8. CATHODE 6</p> | <p>STYLE 22:
 PIN 1. I/O LINE 1
 2. COMMON CATHODE/VCC
 3. COMMON CATHODE/VCC
 4. I/O LINE 3
 5. COMMON ANODE/GND
 6. I/O LINE 4
 7. I/O LINE 5
 8. COMMON ANODE/GND</p> | <p>STYLE 23:
 PIN 1. LINE 1 IN
 2. COMMON ANODE/GND
 3. COMMON ANODE/GND
 4. LINE 2 IN
 5. LINE 2 OUT
 6. COMMON ANODE/GND
 7. COMMON ANODE/GND
 8. LINE 1 OUT</p> | <p>STYLE 24:
 PIN 1. BASE
 2. EMITTER
 3. COLLECTOR/ANODE
 4. COLLECTOR/ANODE
 5. CATHODE
 6. CATHODE
 7. COLLECTOR/ANODE
 8. COLLECTOR/ANODE</p> |
| <p>STYLE 25:
 PIN 1. VIN
 2. N/C
 3. REXT
 4. GND
 5. IOUT
 6. IOUT
 7. IOUT
 8. IOUT</p> | <p>STYLE 26:
 PIN 1. GND
 2. dv/dt
 3. ENABLE
 4. ILIMIT
 5. SOURCE
 6. SOURCE
 7. SOURCE
 8. VCC</p> | <p>STYLE 27:
 PIN 1. ILIMIT
 2. OVLO
 3. UVLO
 4. INPUT+
 5. SOURCE
 6. SOURCE
 7. SOURCE
 8. DRAIN</p> | <p>STYLE 28:
 PIN 1. SW_TO_GND
 2. DASIC_OFF
 3. DASIC_SW_DET
 4. GND
 5. V_MON
 6. VBULK
 7. VBULK
 8. VIN</p> |
| <p>STYLE 29:
 PIN 1. BASE, DIE #1
 2. EMITTER, #1
 3. BASE, #2
 4. EMITTER, #2
 5. COLLECTOR, #2

DESCRIPTION:	SOIC-8 NB	PAGE 2 OF 2

onsemi and **ONSEMI** are trademarks of Semiconductor Components Industries, LLC dba **onsemi** or its subsidiaries in the United States and/or other countries. **onsemi** reserves the right to make changes without further notice to any products herein. **onsemi** makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does **onsemi** assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. **onsemi** does not convey any license under its patent rights nor the rights of others.

onsemi, **Onsemi**, and other names, marks, and brands are registered and/or common law trademarks of Semiconductor Components Industries, LLC dba "**onsemi**" or its affiliates and/or subsidiaries in the United States and/or other countries. **onsemi** owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of **onsemi**'s product/patent coverage may be accessed at www.onsemi.com/site/pdf/Patent-Marking.pdf. **onsemi** reserves the right to make changes at any time to any products or information herein, without notice. The information herein is provided "as-is" and **onsemi** makes no warranty, representation or guarantee regarding the accuracy of the information, product features, availability, functionality, or suitability of its products for any particular purpose, nor does **onsemi** assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. Buyer is responsible for its products and applications using **onsemi** products, including compliance with all laws, regulations and safety requirements or standards, regardless of any support or applications information provided by **onsemi**. "Typical" parameters which may be provided in **onsemi** data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. **onsemi** does not convey any license under any of its intellectual property rights nor the rights of others. **onsemi** products are not designed, intended, or authorized for use as a critical component in life support systems or any FDA Class 3 medical devices or medical devices with a same or similar classification in a foreign jurisdiction or any devices intended for implantation in the human body. Should Buyer purchase or use **onsemi** products for any such unintended or unauthorized application, Buyer shall indemnify and hold **onsemi** and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that **onsemi** was negligent regarding the design or manufacture of the part. **onsemi** is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.
