

Schottky Barrier Diode

NSR02F30NXT5G

These Schottky barrier diodes are optimized for low forward voltage drop and low leakage current. The DSN2 (Dual Silicon No-lead) package is a chip level package using solderable metal contacts under the package similar to DFN style packages. The DSN2 style package enables 100% utilization of the package area for active silicon, offering a significant performance per board area advantage compared to products in plastic molded packages. The low thermal resistance enables designers to meet the challenging task of achieving higher efficiency and meeting reduced space requirements.

Features

- Very Low Forward Voltage Drop – 370 mV @ 10 mA
