1/1.8-inch 8 MP CMOS Digital Image Sensor

AR0822

General Description

The AR0822 is a stacked 1/1.8-inch BSI (back side illuminated) CMOS digital image sensor with an active-pixel array of 3840 (H) x 2160 (V). It captures images in either linear or high dynamic range modes with a rolling-shutter readout, and includes sophisticated camera functions such as binning, windowing and both video and single frame modes. It is designed for both low light and high dynamic range performance. AR0822 can combine on chip up to three exposures and compand to 12-bit HDR output or it could provide line interleaved output of two exposures to support off chip HDR in an ISP chip. It could also provide enhanced Dynamic Range from single exposure. The AR0822 produces extraordinarily clear, sharp digital pictures, and its ability to capture both continuous video and single frames makes it the perfect choice for security applications.
