

32-tap Digital **Potentiometer (POT)**

CAT5115

Description

The CAT5115 is a single digital POT designed as an electronic replacement for mechanical potentiometers and trim pots. Ideal for automated adjustments on high volume production lines, they are also well suited for applications where equipment requiring periodic adjustment is either difficult to access or located in a hazardous or remote environment.

The CAT5115 contains a 32-tap series resistor array connected between two terminals R_H and R_L. An up/down counter and decoder that are controlled by three input pins, determines which tap is connected to the wiper, R_W. The wiper is always set to the mid point, tap 15 at power up. The tap position is not stored in memory. Wiper-control of the CAT5115 is accomplished with three input control pins, \overline{CS} , U/\overline{D} , and \overline{INC} . The \overline{INC} input increments the wiper in the direction which is determined by the logic state of the U/\overline{D} input. The \overline{CS} input is used to select the device.

The digital POT can be used as a three-terminal resistive divider or ..rol.
..ρ position on as a two-terminal variable resistor. Digital POTs bring variability and programmability to a wide variety of applications including control, parameter adjustments, and signal processing.

For a pin-compatible device that recalls a stored tap position on power-up refer to the CAT5114 data sheet.

Features

- 32-position Linear Taper Potentiometer
- Low Power CMOS Technology
- Single Supply Operation: 2.5 V 6.0
- Increment Up/Down Serial Interface
- Resistance Values: $10 \text{ k}\Omega$, $50 \text{ k}\Omega$ and $100 \text{ k}\Omega$
- Available in PDIP, SOIC, TSSOP, MSOP Packages
- These Devices are Pb-Free, Halogen Free/BFR Free and are RoHS Compliant

1

Applications

- Automated Product Calibration
- Remote Control Adjustments
- Offset, Gain and Zero Control
- Tamper-proof Calibrations
- Contrast, Brightness and Volume Controls
- Motor Controls and Feedback Systems
- Programmable Analog Functions

ORDERING INFORMATION

See detailed ordering and shipping information in the package dimensions section on page 8 of this data sheet.

FUNCTIONAL DIAGRAM

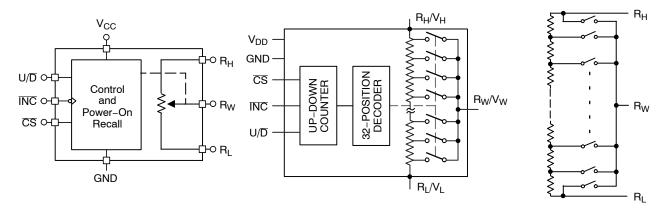

Figure 1. General

Figure 2. Detailed

Figure 3. Electronic Potentiometer Implementation

Table 1. PIN DESCRIPTIONS

Name	Function
ĪNC	Increment Control
U/D	Up/Down Control
R _H	Potentiometer High Terminal
GND	Ground
R _W	Buffered Wiper Terminal
R _L	Potentiometer Low Terminal
CS	Chip Select
V _{CC}	Supply Voltage

PIN FUNCTION

INC: Increment Control Input

The \overline{INC} input moves the wiper in the up or down direction determined by the condition of the U/\overline{D} input.

U/**D**: Up/Down Control Input

The U/\overline{D} input controls the direction of the wiper movement. When in a high state and \overline{CS} is low, any high-to-low transition on \overline{INC} will cause the wiper to move one increment toward the R_H terminal. When in a low state and \overline{CS} is low, any high-to-low transition on \overline{INC} will cause the wiper to move one increment towards the R_L terminal.

R_H: High End Potentiometer Terminal

 $R_{\rm H}$ is the high end terminal of the potentiometer. It is not required that this terminal be connected to a potential greater than the $R_{\rm L}$ terminal. Voltage applied to the $R_{\rm H}$ terminal cannot exceed the supply voltage, V_{CC} or go below ground, GND.

R_W: Wiper Potentiometer Terminal

 R_W is the wiper terminal of the potentiometer. Its position on the resistor array is controlled by the control inputs, \overline{INC} ,

 U/\overline{D} and \overline{CS} . Voltage applied to the R_W terminal cannot exceed the supply voltage, V_{CC} or go below ground, GND.

RL: Low End Potentiometer Terminal

 $R_{\rm L}$ is the low end terminal of the potentiometer. It is not required that this terminal be connected to a potential less than the $R_{\rm H}$ terminal. Voltage applied to the $R_{\rm L}$ terminal cannot exceed the supply voltage, $V_{\rm CC}$ or go below ground, GND. $R_{\rm L}$ and $R_{\rm H}$ are electrically interchangeable.

CS: Chip Select

The chip select input is used to activate the control input of the CAT5115 and is active low. When in a high state, activity on the \overline{INC} and $\overline{U/D}$ inputs will not affect or change the position of the wiper.

DEVICE OPERATION

The CAT5115 operates like a digitally controlled potentiometer with R_H and R_L equivalent to the high and low terminals and R_W equivalent to the mechanical potentiometer's wiper. There are 32 available tap positions including the resistor end points, R_H and R_L . There are 31 resistor elements connected in series between the R_H and R_L terminals. The wiper terminal is connected to one of the 32 taps and controlled by three inputs, $\overline{\rm INC}$, U/D and $\overline{\rm CS}$. These inputs control a five-bit up/down counter whose output is decoded to select the wiper position.

With $\overline{\text{CS}}$ set LOW the CAT5115 is selected and will respond to the U/ $\overline{\text{D}}$ and $\overline{\text{INC}}$ inputs. HIGH to LOW transitions on $\overline{\text{INC}}$ will increment or decrement the wiper (depending on the state of the U/ $\overline{\text{D}}$ input and five-bit counter). The wiper, when at either fixed terminal, acts like its mechanical equivalent and does not move beyond the last position. When the CAT5115 is powered-down, the wiper position is reset. When power is restored, the counter is set to the mid point, tap 15.

Table 2. OPERATION MODES

INC	CS	U/D	Operation
High to Low	Low	High	Wiper toward H
High to Low	Low	Low	Wiper toward L
High	Low to High	Х	Store Wiper Position
Low	Low to High	Х	No Store, Return to Standby
Х	High	Х	Standby

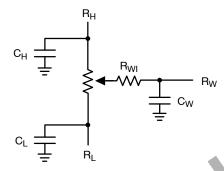

Figure 4. Potentiometer Equivalent Circuit

Table 3. ABSOLUTE MAXIMUM RATINGS

Parameters	Ratings	Units
Supply Voltage V _{CC} to GND	2 0.5 to +7	V
Inputs CS to GND	-0.5 to V _{CC} +0.5	V
INC to GND	-0.5 to V _{CC} +0.5	V
U/D to GND	-0.5 to V _{CC} +0.5	V
H to GND	-0.5 to V _{CC} +0.5	٧
L to GND	-0.5 to V _{CC} +0.5	٧
W to GND	-0.5 to V _{CC} +0.5	٧
Operating Ambient Temperature Industrial ('I' suffix)	-40 to +85	°C
Junction Temperature	+150	°C
Storage Temperature	-65 to 150	°C
Lead Soldering (10 s max)	+300	°C

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

Table 4. RELIABILITY CHARACTERISTICS

Symbol	Parameter	Test Method	Min	Тур	Max	Units
V _{ZAP} (Note 1)	ESD Susceptibility	MIL-STD-883, Test Method 3015	2000			V
I _{LTH} (Notes 1, 2)	Latch-up	JEDEC Standard 17	100			mA
T _{DR}	Data Retention	MIL-STD-883, Test Method 1008	100			Years
N _{END}	Endurance	MIL-STD-883, Test Method 1003	1,000,000			Stores

- 1. This parameter is tested initially and after a design or process change that affects the parameter.
- 2. Latch-up protection is provided for stresses up to 100 mA on address and data pins from -1 V to V_{CC} + 1 V.

Table 5. DC ELECTRICAL CHARACTERISTICS ($V_{CC} = +2.5 \text{ V to } +6 \text{ V}$ unless otherwise specified)

Symbol	Parameter	Conditions	Min	Тур	Max	Units
POWER SUPPL	Y
