

Linear LED Drivers with Single-Wire Digital Interface

FAN5622, FAN5624, FAN5626

Description

The FAN5622, FAN5624, and FAN5626 are two-, four-, and six-channel current-sink linear LED drivers used to backlight the main LCD displays or keypads in mobile electronics, such as cellular phone handsets.

A very low dropout of 50 mV allows driving LEDs without any inductors or switch capacitors. The brightness levels of the LED outputs are programmed through single-wire digital control interface. The user can program 32 linear dimming steps and turn on and off the LEDs through this interface by applying digital pulses.

The FAN562x family of linear LED drivers provides high efficiency due to the low drop-out voltage of the LED driver. Good matching between different channels of LED output is provided across the entire 32 dimming steps. These LED drivers also integrate short circuit, under-voltage, and thermal protection to ensure for a more robust solution.

The FAN5622, FAN5624, and FAN5626 are available in very small form-factor packages: 6-pin Super SOT23, 10-lead UMLP, and 10-lead MicroPak™ MLP, respectively.

Features

- Family of Three Linear Current-Sink LED Drivers that Support 2, 4, or 6 LED Outputs
- Current Sink Driver for Each LED Output:
 - ♦ 30 mA Maximum Output Current
 - ♦ 50 mV Drop-out at 15 mA I_{OUT}
 - ♦ Better than 3% Matching between Channels
 - ♦ External R_{SET}
- Single-Wire Digital Control Interface for Easy Programming
 - ♦ 32 Linear Steps of Dimming Control
- Less than 1 μ A Shutdown Current
- Short-Circuit, Under-Voltage, and Thermal Protection
- Wide Input Voltage Range: 2.7 to 5.5 V
- Small Form-Factor Packages:
- These are Pb-Free Devices
 - ♦ FAN5622: 6-Pin Super SOT23
 - ♦ FAN5624: 10-Lead 1.4x1.8x0.55 mm UMLP
 - ♦ FAN5626: 10-Lead 1.6x2.1x0.55 mm MicroPak MLP

PIN DEFINITIONS

Pin No.			Name	Description
FAN5622 SSOT23-6	FAN5624 UMLP10	FAN5626 MicroPak MLP10		
3	5	1	VIN	Input Voltage. Connect to 2.7 – 5.5 V _{DC} input power source.
2	6	2	GND	Ground
5	3	10	ISET	LED Current Setting. Full-scale LED current is set by tying this pin through a resistor (R _{SET}) to GND.
1	7	3	CTRL	Control pin. Program dimming levels by driving pin with digital pulses. This pin cannot be left floating.
6	8	4	LED1	LED Cathode #1. LED current sink output.
4	10	5	LED2	LED Cathode #2. LED current sink output.
	1	6	LED3	LED Cathode #3. LED current sink output.
	2	7	LED4	LED Cathode #4. LED current sink output.
		8	LED5	LED Cathode #5. LED current sink output.
		9	LED6	LED Cathode #6. LED current sink output.
	4, 9		N/C	No Connect

ABSOLUTE MAXIMUM RATINGS

Symbol	Parameter		Min	Max	Unit
V _{CC}	VIN Pin		−0.3	6.0	V
	Other Pins (Note 1)		−0.3	V _{IN} + 0.3	V
ESD	Electrostatic Discharge Protection Level	Human Body Model per JESD22–A114	3.0		kV
		Charged Device Model per JESD22–C101	1.5		kV
T _J	Junction Temperature		−40	+150	°C
T _{STG}	Storage Temperature		−65	+150	°C
T _L	Lead Soldering Temperature, 10 Seconds		–	+260	°C

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

1. Lesser of 6.0 V or V_{IN} + 0.3 V.

RECOMMENDED OPERATING CONDITIONS

Symbol	Parameter	Min	Max	Unit
V _{IN}	Power Supply Voltage Range	2.7	5.5	V
T _A	Operating Ambient Temperature Range	−40	+85	°C
T _J	Operating Junction Temperature Range	−40	+125	°C
I _{LED(FS)}	Full-Scale LED Current	5	30	mA

Functional operation above the stresses listed in the Recommended Operating Ranges is not implied. Extended exposure to stresses beyond the Recommended Operating Ranges limits may affect device reliability.

THERMAL PROPERTIES (Junction-to-ambient thermal resistance is a function of application and board layout. This data is measured with boards in accordance to JEDEC standard JESD51. Special attention must be paid not to exceed junction temperature T_{J(max)} at a given ambient temperature T_A.)

Symbol	Parameter	Typical	Unit
θ _{JA}	Junction-to-Ambient Thermal Resistance, SSOT23–6 Package	235	°C/W
	Junction-to-Ambient Thermal Resistance, UMLP10 Package (Note 2)	287	°C/W
	Junction-to-Ambient Thermal Resistance, MicroPak MLP10 package (Note 3)	220	°C/W

2. Recommended not to exceed 132 mW of maximum power dissipation.

3. Recommended not to exceed 198 mW of maximum power dissipation.

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

- For the two, four, and six LED current sinks of FAN5622, FAN5624, and FAN5626 respectively; the following are determined: the maximum sink current of the two, four, and six LED outputs (MAX); the minimum sink current of the two, four, and six outputs (MIN); and the average sink current (AVG). For all of the LED outputs, two matching numbers are calculated: $(MAX - AVG) / AVG$ and $(AVG - MIN) / AVG$. The largest number of the two (worst case) is considered the matching figure for the part. The matching figure for a given part is considered to be the highest matching figure of all LED outputs. The typical specification provided is the most likely norm of the matching figure for all parts.

CIRCUIT DESCRIPTION

The FAN5622, FAN5624, and FAN5626 are a family of current-sink linear LED driver ICs able to drive two, four, and six LEDs respectively. These three devices are powered directly from 2.7 V to 5.5 V supply and all the channels are controlled via the integrated current sinks from the external power source. Designed with a very low drop-out voltage, the FAN562x products can operate close to the input supply voltage without the need for additional inductive boost or capacitive switching circuitry.

All three devices require only two additional discrete passive components: a single 1 μ F input ceramic capacitor and a resistor (R_{SET}) to set the maximum current for the LEDs. Each current-sink output provides constant current and can drive the LEDs up to 30 mA. ON Semiconductor's TinyWire single-wire digital interface enables these LED drivers to program the brightness level of the LEDs in 32 linear steps.

Setting Maximum Current

The maximum LED current of the FAN5622, FAN5624, and FAN5626 is programmed by an external resistor called R_{SET} . The maximum full-scale LED current for all three LED drivers is 30 mA and it can go as low as 5 mA. The FAN562x products also operate below 5 mA full-scale LED current by using a larger R_{SET} value. However, the LED channel accuracy and matching specifications are guaranteed. Table 1 shows the R_{SET} resistor values for several full-scale current levels.

Table 1. MAXIMUM LED CURRENT SETTINGS BY RESISTOR

I_{LED} (mA)	R_{SET} (k Ω)
5	56.20
10	28.70
15	19.10
20	14.30
25	11.50
30	9.53

Digital Interface & Dimming Control

The FAN5622, FAN5624, and FAN5626 implement a simple single-wire digital interface to program the LED brightness to one of thirty two (32) levels spaced in linear steps. To maintain the brightness of the LEDs at a specific dimming level, the digital pulse signal to the CTRL pin should be held HIGH for that last pulse. It is held HIGH for as long as desired to keep the LEDs illuminated at that specific brightness level.

Table 2 outlines the dimming levels while Figure 17 shows how to change the dimming levels.

Table 2. BRIGHTNESS CONTROL LEVELS ($R_{SET} = 19.10$ k Ω)

Dimming Level	Current Level	I_{LED} (mA)
