# High Performance SPDT Analog Switch with Over-Voltage Tolerance

# FSA3051

#### Description

The FSA3051 is a 6  $\Omega$ , bi-directional, low-power, two port, high-speed, Single Pole / Double Throw (SPDT) analog switch. It features an extremely low on capacitance (C<sub>ON</sub>) of 7.7 pF and wide bandwidth of 1.0 GHz.

The FSA3051 contains special circuitry on the switch I/O pins for applications where the  $V_{CC}$  supply is powered-off ( $V_{CC} = 0$  V), which allows the device to withstand an over-voltage condition. This device is designed to minimize current consumption even when the control voltage applied to the select (S) pin is lower than the supply voltage ( $V_{CC}$ ). This feature is especially valuable to ultra-portable applications, such as cell phones, allowing for direct interface with the general-purpose I/Os of the baseband processor. Other applications include switching in portable cell phones, PDAs, digital cameras, printers, and notebook computers.
