

# 3.3 V, Crystal to 100 MHz Quad HCSL/LVDS PCIe Clock Generator

## NB3N51054

The NB3N51054 is a precision, low phase noise clock generator that supports PCI Express requirements. The device accepts a 25 MHz fundamental mode parallel resonant crystal or a 25 MHz reference clock signal and generates four differential HCSL/LVDS outputs (See Figure 7 for LVDS interface) at 100 MHz clock frequency with maximum skew of 40 ps. Through I<sup>2</sup>C interface, NB3N51054 provides selectable spread spectrum options of -0.35% and -0.5% for applications demanding low Electromagnetic Interference (EMI) as well as optimum performance with no spread option. The I<sup>2</sup>C interface further enables control of each output and they can be enabled/disabled individually.

### Features

- Uses 25 MHz Fundamental Crystal or Reference Clock Input
- Four Low Skew HCSL or LVDS Outputs
- I<sup>2</sup>C Support with Read Back Capability
- Spread of -0.35%, -0.5% and No Spread
- Individual Output Enable/Disable Control through I<sup>2</sup>C
- PCIe Gen 1, Gen 2, Gen 3, Gen 4 Compliant
- Typical Phase Jitter @ 100 MHz (Integrated 12 kHz to 20 MHz): 0.5 ps
- Typical Cycle-Cycle Jitter @ 100 MHz (10k cycles): 20 ps
- Phase Noise @ 100 MHz:
 

Offset	Noise Power
100 Hz	-104 dBc/Hz
1 kHz	-121 dBc/Hz
10 kHz	-131 dBc/Hz
100 kHz	-136 dBc/Hz
1 MHz	-140 dBc/Hz
10 MHz	-155 dBc/Hz
- Operating Power Supply: 3.3 V ± 5%
- Industrial Temperature Range: -40°C to 85°C
- Functionally Compatible with ICS841S104I with enhanced performance
- These are Pb-Free Devices

### Application

- Networking
- Consumer
- Computing and Peripherals
- Industrial Equipment
- PCIe Clock Generation Gen 1, Gen 2, Gen 3 and Gen 4

TSSOP-24  
 CASE 948H

### ORDERING INFORMATION

See detailed ordering and shipping information on page 14 of this data sheet.

# NB3N51054

## BLOCK DIAGRAM

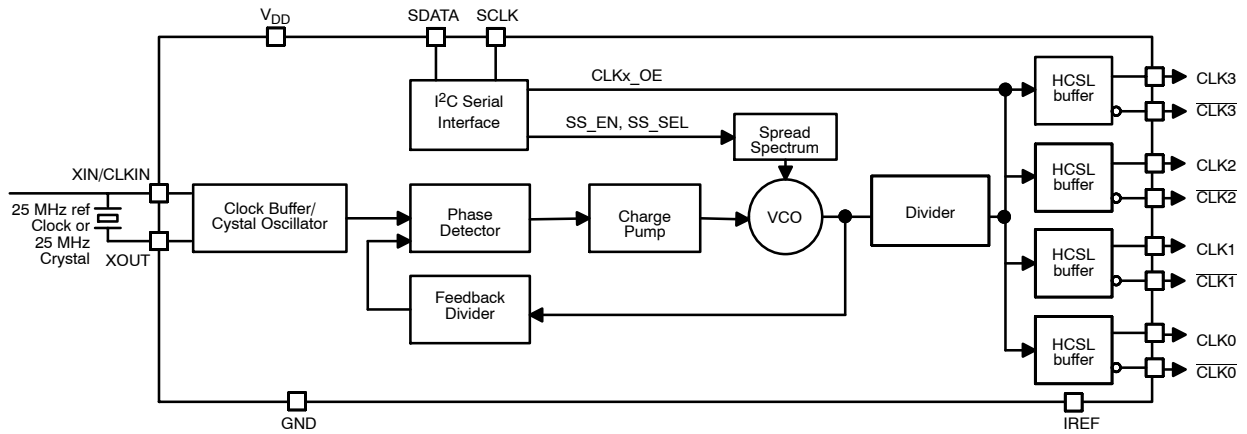

Figure 1. Block Diagram

## PIN CONFIGURATION

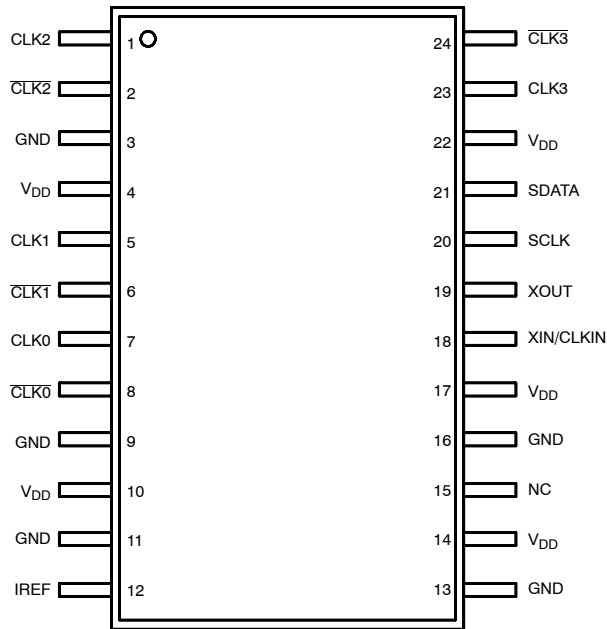

Figure 2. Pin Configuration (Top View)

Table 1. PIN DESCRIPTION

Pin #	Pin Name	Type	Description
1	CLK2	HCSL or LVDS output	Noninverted clock output. (For LVDS levels see Figure 4)
2	$\overline{\text{CLK2}}$	HCSL or LVDS output	Inverted clock output. (For LVDS levels see Figure 4)
3	GND	Ground	Power supply ground 0 V. This pin provides GND return path for the device.
4	V <sub>DD</sub>	Power	Positive supply voltage pin connected to +3.3 V typical supply voltage.
5	CLK1	HCSL or LVDS output	Noninverted clock output. (For LVDS levels see Figure 4)
6	$\overline{\text{CLK1}}$	HCSL or LVDS output	Inverted clock output. (For LVDS levels see Figure 4)
7	CLK0	HCSL or LVDS output	Noninverted clock output. (For LVDS levels see Figure 4)
8	$\overline{\text{CLK0}}$	HCSL or LVDS output	Inverted clock output. (For LVDS levels see Figure 4)
9	GND	Ground	Power supply ground 0 V. This pin provides GND return path for the device.
10	V <sub>DD</sub>	Power	Positive supply voltage pin connected to +3.3 V typical supply voltage.
11	GND	Ground	Power supply ground 0 V. This pin provides GND return path for the device.
12	IREF	Output	Output current reference pin. Connect to precision resistor (typical 475 Ω) to set internal current reference
13	GND	Ground	Power supply ground 0 V. This pin provides GND return path for the device.
14	V <sub>DD</sub>	Power	Positive supply voltage pin connected to +3.3 V typical supply voltage.
15	NC	NC	No Connect
16	GND	Ground	Power supply ground 0 V. This pin provides GND return path for the device.
17	V <sub>DD</sub>	Power	Positive supply voltage pin connected to +3.3 V typical supply voltage.
18	XIN / CLKIN	Input	Crystal or Clock input. Connect to 25 MHz crystal OR 25 MHz single-ended reference clock input.
19	XOUT	Input	Crystal input. Connect to 25 MHz crystal or float this pin while using reference clock.
20	SCLK	Input	I <sup>2</sup> C compatible clock. Internal pull-up resistors
21	SDATA	Input/ Output	I <sup>2</sup> C compatible data. Internal pull-up resistors
22	V <sub>DD</sub>	Power	Positive supply voltage pin connected to +3.3 V typical supply voltage.
23	CLK3	HCSL or LVDS output	Noninverted clock output. (For LVDS levels see Figure 4)
24	$\overline{\text{CLK3}}$	HCSL or LVDS output	Inverted clock output. (For LVDS levels see Figure 4)

**Recommended Crystal Parameters**

Crystal	Fundamental AT-Cut
Frequency	25 MHz
Load Capacitance	16–20 pF
Shunt Capacitance, C0	7 pF Max
Equivalent Series Resistance	50 Ω Max
Initial Accuracy at 25 °C	±20 ppm
Temperature Stability	±30 ppm
Aging	±20 ppm

**Serial Data Interface**

To enhance the flexibility and function of the clock synthesizer, a two-signal I<sup>2</sup>C serial interface is provided. All the clock outputs can be individually enabled or disabled in a glitch free manner through this serial data interface. In addition, spread spectrum can be enabled for -0.35% or -0.5% down spread or no spread option can be selected through this interface. The registers associated with the serial interface initialize to their default settings upon power-up.

**Data Protocol**

The clock driver serial protocol accepts byte write, byte read, block write and block read operations from the controller. For block write/read operation, the bytes must be accessed in sequential order from lowest to highest byte (most significant bit first) with the ability to stop after any complete byte has been transferred. For byte write and byte read operations, the system controller can access individually indexed bytes. The offset of the indexed byte is encoded in the command code, as described in Table 2 below.

**Table 2. COMMAND CODE DEFINITION**

Bit	Description
7	0 = Block read or Block write operation, 1= Byte read or byte write operation
(6:0)	Byte offset for byte read or byte write operation. For Block read or Block write operations, these bits should be '0000000'.

The block write and block read protocol is outlined in Table 3, while Table 4 outlines the corresponding byte write and byte read protocol. The slave receiver address is 11010010 (D2h).

**Table 3. BLOCK READ AND BLOCK WRITE PROTOCOL**

Block Write Protocol		Block Read Protocol	
Bit	Description	Bit	Description

**Table 13. ATTRIBUTES**

Characteristic	Value
Internal Pull-up Resistor (SCLK, SDATA)	50 kΩ
ESD Protection Human Body Model	2 kV
Moisture Sensitivity, Indefinite Time Out of Dray Pack (Note 1)	Level 1
Flammability Rating Oxygen Index: 28 to 34	UL 94 V-0 @ 0.125 in
Transistor Count	132,000
Meets or exceeds JEDEC Spec EIA/JESD78 IC Latchup Test	

1. For additional information, see Application Note AND8003/D.

**Table 14. ABSOLUTE MAXIMUM RATING** (Note 2)

Symbol	Parameter	Rating	Unit
V <sub>DD</sub>	Positive power supply with respect to GND	+4.6	V
V <sub>I</sub>	Input Voltage with respect to device GND	-0.5 V to V <sub>DD</sub> + 0.5 V	V
T <sub>A</sub>	Operating Temperature Range	-40 to +85	°C
T <sub>STG</sub>	Storage temperature	-65 to +150	°C
T <sub>SOL</sub>	Max. Soldering Temperature (10 sec)	265	°C
θ <sub>JA</sub>	Thermal Resistance (Junction-to-ambient) 0 lfpm (Note 3) 500 lfpm	65 57	°C/W
θ <sub>JC</sub>	Thermal Resistance (Junction-to-case)	50	°C/W

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

- Maximum ratings applied to the device are individual stress limit values (not normal operating conditions) and not valid simultaneously. If stress limits are exceeded device functional operation is not implied, damage may occur and reliability may be affected.
- JEDEC standard multilayer board – 2S2P (2 signal, 2 power).

**Table 15. DC ELECTRICAL CHARACTERISTICS** (V<sub>DD</sub> = 3.3 V ± 5%, GND = 0 V, T<sub>A</sub> = -40°C to 85°C, Note 4)

Symbol	Parameter	Min	Typ	Max	Unit
V <sub>DD</sub>	Power Supply Voltage	3.135	3.3	3.465	V
I <sub>DD</sub>	Power Supply Current, spread OFF, all outputs ON		125	130	mA
I <sub>OFF</sub>	Power Supply Current when all outputs are set OFF through I <sup>2</sup> C, spread OFF			50	mA
V <sub>IH</sub>	Input HIGH Voltage (XIN/CLKIN)	2.0		V <sub>DD</sub> + 0.3	V
V <sub>IL</sub>	Input LOW Voltage (XIN/CLKIN)	GND - 0.3		0.8	V
I <sub>IH</sub>	Input HIGH Current (SCLK/SDATA), V <sub>DD</sub> = V <sub>IN</sub> = 3.465 V			10	μA
I <sub>IL</sub>	Input LOW Current (SCLK/SDATA), V <sub>DD</sub> = 3.465 V, V <sub>IN</sub> = 0 V	-150			μA
V <sub>OH</sub>	Output HIGH Voltage for HCSL Output (Note 5)	660		850	mV
V <sub>OL</sub>	Output LOW Voltage for HCSL Output (Note 5)	-150			mV
V <sub>CROSS</sub>	Crossing Voltage Magnitude (Absolute) for HCSL Output (Notes 5, 6, 7)	250		550	mV
ΔV <sub>CROSS</sub>	Change in Magnitude of V <sub>CROSS</sub> for HCSL Output (Notes 5, 6, 8)			150	mV

NOTE: Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lfpm.

- Measurement taken with outputs terminated with R<sub>S</sub> = 33.2 Ω, R<sub>L</sub> = 49.9 Ω, with test load capacitance of 2 pF and current biasing resistor set at R<sub>REF</sub> = 475 Ω. See Figure 6. Guaranteed by characterization.
- Measurement taken from single-ended waveform
- Measured at crossing point where the instantaneous voltage value of the rising edge of CLKx+ equals the falling edge of CLKx-.
- Refers to the total variation from the lowest crossing point to the highest, regardless of which edge is crossing. Refers to all crossing points for this measurement.
- Defined as the total variation of all crossing voltage of rising CLKx+ and falling CLKx-. This is maximum allowed variance in the V<sub>CROSS</sub> for any particular system.

10. Electrical parameters are guaranteed over the specified ambient operating temperature range, which is established when the device is mounted in a test socket with maintained transverse airflow greater than 500 lfpm. The device will meet specifications after thermal equilibrium has been reached under these conditions.
11. Peak-to-Peak jitter after applying system transfer function for the Common Clock Architecture. Maximum limit for PCI Express Gen 1 is 86 ps peak-to-peak for a sample size of 10<sup>6</sup> clock periods.
12. RMS jitter after applying the two evaluation bands to the two transfer functions defined in the Common Clock Architecture and reporting the worst case results for each evaluation band. Maximum limit for PCI Express Generation 2 is 3.1 ps RMS for tREFCLK\_HF\_RMS (High Band) and 3.0 ps RMS for tREFCLK\_LF\_RMS (Low Band).
13. RMS jitter after applying system transfer function for the common clock architecture.
14. Measurement taken from differential output on single-ended channel terminated with R<sub>S</sub> = 33.2 Ω, R<sub>L</sub> = 49.9 Ω, with test load capacitance of 2 pF and current biasing resistor set at R<sub>REF</sub> = 475 Ω. See Figure 6. This parameter is guaranteed by characterization. Not tested in production

# NB3N51054

## PHASE NOISE

Figure 3. Typical Phase Noise Plot at 100 MHz ( $f_{CLKIN} = 25$  MHz Crystal,  $f_{CLKOUT} = 100$  MHz, RMS Phase Jitter = 424 fs for Integration Range of 12 kHz to 20 MHz, Output Termination = HCSL type)

APPLICATION INFORMATION

**Crystal Input Interface**

Figure 4 shows the NB3N51044 device crystal oscillator interface using a typical parallel resonant crystal. The device crystal connections should include pads for small capacitors from X1 to ground and from X2 to ground. These capacitors,  $C_1$  and  $C_2$ , need to consider the stray capacitances of the board and are used to match the nominally required crystal load capacitance  $C_L$ . A parallel crystal with loading capacitance  $C_L = 18 \text{ pF}$  would use  $C_1 = 26 \text{ pF}$  and  $C_2 = 26 \text{ pF}$

as nominal values, assuming approximately 2 pF of stray capacitance per trace and approximately 8 pF of internal capacitance.

$$C_L = (C_1 + C_{\text{stray}} + C_{\text{in}}) / 2; C_1 = C_2$$

The frequency accuracy and duty cycle skew can be fine-tuned by adjusting the  $C_1$  and  $C_2$  values. For example, increasing the  $C_1$  and  $C_2$  values will reduce the operational frequency.

Figure 4. Crystal Interface Loading

**Power Supply Filter**

In order to isolate the NB3N51044 from system power supply, noise decoupling is required. The 10  $\mu\text{F}$  and a 0.1  $\mu\text{F}$  cap from supply pins to GND decoupling capacitor has to be connected between  $V_{DD}$  (pins 3, 9, 11, 13 and 16) and GND (pins 4, 10, 14, 17 and 22). It is recommended to place

decoupling capacitors as close as possible to the device to minimize lead inductance.

**Termination**

The output buffer structure is shown in the Figure 5.

Figure 5. Simplified Output Structure

## NB3N51054

The outputs can be terminated to drive HCSL receiver (see Figure 6) or LVDS receiver (see Figure 7). HCSL output interface requires 49.9  $\Omega$  termination resistors to GND for generating the output levels. LVDS output interface may not

require the 100  $\Omega$  near the LVDS receiver if the receiver has internal 100  $\Omega$  termination. An optional series resistor  $R_L$  may be connected to reduce the overshoots in case of impedance mismatch.

### HCSL INTERFACE

Figure 6. Typical Termination for HCSL Output Driver and Device Evaluation

### LVDS COMPATIBLE INTERFACE

Figure 7. Typical Termination for LVDS Device Load

onsemi and ONSEMI are trademarks of Semiconductor Components Industries, LLC dba onsemi or its subsidiaries in the United States and/or other countries. onsemi reserves the right to make changes without further notice to any products herein. onsemi makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does onsemi assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. onsemi does not convey any license under its patent rights nor the rights of others.

**onsemi**, **Onsemi**, and other names, marks, and brands are registered and/or common law trademarks of Semiconductor Components Industries, LLC dba "**onsemi**" or its affiliates and/or subsidiaries in the United States and/or other countries. **onsemi** owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of **onsemi**'s product/patent coverage may be accessed at [www.onsemi.com/site/pdf/Patent-Marking.pdf](http://www.onsemi.com/site/pdf/Patent-Marking.pdf). **onsemi** reserves the right to make changes at any time to any products or information herein, without notice. The information herein is provided "as-is" and **onsemi** makes no warranty, representation or guarantee regarding the accuracy of the information, product features, availability, functionality, or suitability of its products for any particular purpose, nor does **onsemi** assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. Buyer is responsible for its products and applications using **onsemi** products, including compliance with all laws, regulations and safety requirements or standards, regardless of any support or applications information provided by **onsemi**. "Typical" parameters which may be provided in **onsemi** data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. **onsemi** does not convey any license under any of its intellectual property rights nor the rights of others. **onsemi** products are not designed, intended, or authorized for use as a critical component in life support systems or any FDA Class 3 medical devices or medical devices with a same or similar classification in a foreign jurisdiction or any devices intended for implantation in the human body. Should Buyer purchase or use **onsemi** products for any such unintended or unauthorized application, Buyer shall indemnify and hold **onsemi** and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that **onsemi** was negligent regarding the design or manufacture of the part. **onsemi** is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.
