

# NCP4545

## ecoSwitch™ Advanced Load Management Controlled Load Switch with Low $R_{ON}$

The NCP4545 load switch provides a component and area-reducing solution for efficient power domain switching with inrush current limit via soft start. It is designed to integrate control and driver functionality with a high performance low on-resistance power MOSFET in a single device. This cost effective solution is ideal for power management and hot-swap applications requiring low power consumption in a small footprint.

### Features

- Advanced Controller with Charge Pump
- Integrated N-Channel MOSFET
- Soft-Start via Adjustable Slew Rate Control
- Low On-Resistance
- Input Voltage Range 0.5 V to 6 V
- Low Standby Current
- Load Bleed Function
- No External Components Required
- Enable Pin with CMOS Input Levels
- This is a Pb-Free Device

### Typical Applications

- Notebook and Tablet Computers
- Handheld Electronics
- Digital Cameras
- Portable Medical Devices
- Hard Drives
- Peripheral Ports

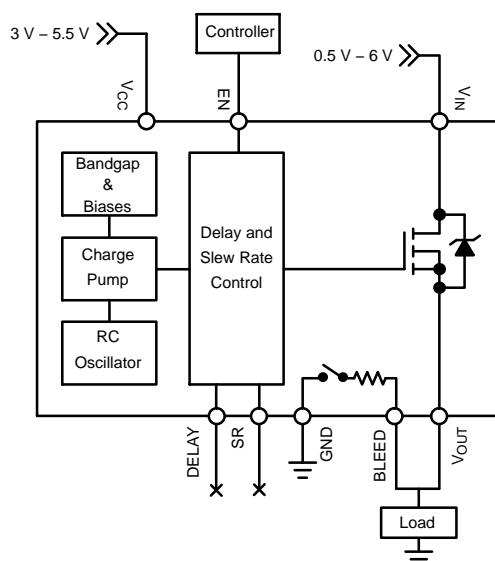

Figure 1. Typical Application – No external components included

### ORDERING INFORMATION

See detailed ordering and shipping information on page 10 of this data sheet.

# NCP4545

## PIN DESCRIPTION

Pin	Name	Function
1	DELAY	Turn-on delay adjustment
2	V <sub>CC</sub>	Supply voltage to controller (3.0 V – 5.5 V)
3	GND	Controller ground
4, 5, 9–14, 18, 19	V <sub>IN</sub>	Drain of MOSFET (0.5 V – 6.0 V)
6–8	V <sub>OUT</sub>	Source of MOSFET connected to load
15	BLEED	Load bleed connection
16	EN	NCP4545IMNTWG – Active–High digital input used to turn on the MOSFET, pin has an internal pull down resistor to GND
		NCP4545IMNTWG–L – Active–Low digital input used to turn on the MOSFET, pin has an internal pull up resistor to V <sub>CC</sub>
17	SR	Slew rate adjustment

## ABSOLUTE MAXIMUM RATINGS

Rating	Symbol	Value	Unit
Supply Voltage Range	V <sub>CC</sub>	–0.3 to 6	V
Input Voltage Range	V <sub>IN</sub>	–0.3 to 6	V
Output Voltage Range	V <sub>OUT</sub>	–0.3 to 6	V
EN Digital Input Range	V <sub>EN</sub>	–0.3 to (V <sub>CC</sub> + 0.3)	V
Thermal Resistance, Junction–to–Air (Note 1)	R <sub>θJA</sub>	49.9	°C/W
Thermal Resistance, Junction–to–Air (Note 2)	R <sub>θJA</sub>	32.8	°C/W
Thermal Resistance, Junction–to–Case (V <sub>IN</sub> Paddle)	R <sub>θJC</sub>	3.3	°C/W
Continuous MOSFET Current (Note 3)	I <sub>MAX</sub>	10.5	A
Total Power Dissipation @ T <sub>A</sub> = 25°C (Notes 1 and 4) Derate above T <sub>A</sub> = 25°C	P <sub>D</sub>	1.30 20.1	W mW/°C
Total Power Dissipation @ T <sub>A</sub> = 25°C (Notes 2 and 4) Derate above T <sub>A</sub> = 25°C	P <sub>D</sub>	1.98 30.5	W mW/°C
Storage Temperature Range	T <sub>STG</sub>	–40 to 150	°C
Lead Temperature, Soldering (10 sec.)	T <sub>SLD</sub>	260	°C
ESD Capability, Human Body Model (Notes 5 and 6)	ESD <sub>HBM</sub>	4.0	kV
ESD Capability, Machine Model (Note 5)	ESD <sub>MM</sub>	200	V
ESD Capability, Charged Device Model (Note 5)	ESD <sub>CDM</sub>	1	kV
Latch–up Current Immunity (Note 5)	LU	100	mA

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

1. Surface–mounted on FR4 board using the minimum recommended pad size, 1 oz Cu.
2. Surface–mounted on FR4 board using 1 sq–in pad, 1 oz Cu.
3. Current limited by package.
4. Specified for derating purposes only, ensure that I<sub>MAX</sub> is never exceeded.
5. Tested by the following methods @ T<sub>A</sub> = 25°C:  
 ESD Human Body Model tested per AEC–Q100–002 (EIA/JESD22–A114)  
 ESD Machine Model tested per EIA/JESD22–A115  
 ESD Charged Device Model per EIA/JESD22–C101  
 Latch–up Current Maximum Rating: ≤100 mA per JEDEC standard: JESD78
6. Rating is for all pins except for V<sub>IN</sub> and V<sub>OUT</sub> which are tied to the internal MOSFET's Drain and Source. Typical MOSFET ESD performance for V<sub>IN</sub> and V<sub>OUT</sub> should be expected and these devices should be treated as ESD sensitive.

# NCP4545

## RECOMMENDED OPERATING RANGES

Rating	Symbol	Min	Max	Unit
Supply Voltage	$V_{CC}$	3	5.5	V
Input Voltage	$V_{IN}$	0.5	6	V
Ground	GND		0	V
Ambient Temperature	$T_A$	0	70	°C
Junction Temperature	$T_J$	0	90	°C

Functional operation above the stresses listed in the Recommended Operating Ranges is not implied. Extended exposure to stresses beyond the Recommended Operating Ranges limits may affect device reliability.

## ELECTRICAL CHARACTERISTICS ( $T_J = 25^\circ\text{C}$ unless otherwise specified)

Parameter	Conditions (Note 7)	Symbol	Min	Typ	Max	Unit
-----------	---------------------	--------	-----	-----	-----	------

### MOSFET

On-Resistance	$V_{CC} = 5.0\text{ V}; V_{IN} = 1.8\text{ V}$	$R_{ON}$		4.7	5.9	m $\Omega$
	$V_{CC} = 5.0\text{ V}; V_{IN} = 5.0\text{ V}$			4.9	6.1	
	$V_{CC} = 3.3\text{ V}; V_{IN} = 1.8\text{ V}$			5.0	6.7	
	$V_{CC} = 3.3\text{ V}; V_{IN} = 5.0\text{ V}$			5.9	7.0	
Leakage Current (Note 8)	$V_{EN} = 0\text{ V}; V_{IN} = 6\text{ V}$	$I_{LEAK}$		0.025	1.0	$\mu\text{A}$

### CONTROLLER

Supply Standby Current (Note 9)	$V_{EN} = 0\text{ V}; V_{CC} = 5.5\text{ V}$	$I_{STBY}$		5.0	15	$\mu\text{A}$
Supply Dynamic Current (Note 10)	$V_{EN} = V_{CC} = 5.5\text{ V}$	$I_{DYN}$		250	500	$\mu\text{A}$
Bleed Resistance		$R_{BLEED}$	50	100	200	$\Omega$
EN Input High Voltage		$V_{IH}$	2.0			V
EN Input Low Voltage		$V_{IL}$			0.8	V
EN Pull Down Resistance	NCP4545IMNTWG	$R_{PD}$	40	100	180	k $\Omega$
EN Pull Up Resistance	NCP4545IMNTWG-L	$R_{PU}$	40	100	180	k $\Omega$

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

7.  $V_{EN}$  shown only for NCP4545IMNTWG (EN Active-High).

8. Average current from  $V_{IN}$  to  $V_{OUT}$  with MOSFET turned off.

9. Average current from  $V_{CC}$  to GND with MOSFET turned off.

10. Average current from  $V_{CC}$  to GND after charge up time of MOSFET.

## APPLICATIONS INFORMATION

**On-Resistance**

The MOSFET gate voltage in the NCP4545 is driven by a charge pump in the controller circuit. The output voltage of the charge pump is dependent on the voltage on  $V_{CC}$ . The  $R_{ON}$  of the MOSFET is in turn dependent on its  $V_{GS}$ . Care must be taken to ensure a sufficient  $V_{CC}$  voltage is used to create the desired  $R_{ON}$  given the anticipated input voltage.

**Enable Control**

The NCP4545 has two separate part numbers, NCP4545IMNTWG and NCP4545IMNTWG-L, that only differ in the polarity of the enable control.

The NCP4545IMNTWG allows for enabling the MOSFET in an Active-High configuration. When the EN pin is at a logic high level and the  $V_{CC}$  supply pin has an adequate voltage applied, the MOSFET will be enabled. Similarly, when the EN pin is at a logic low level, the MOSFET will be disabled. An internal pull down resistor to GND on the EN pin ensures that the MOSFET will be disabled when not being driven.

The NCP4545IMNTWG-L allows for enabling the MOSFET in an Active-Low configuration. When the EN pin is at a logic low level and the  $V_{CC}$  supply pin has an adequate voltage applied, the MOSFET will be enabled. Similarly, when the EN pin is at a logic high level, the MOSFET will be disabled. An internal pull up resistor to  $V_{CC}$  on the EN pin ensures that the MOSFET will be disabled when not being driven.

**Parametric Adjustments**

The NCP4545 can be used in several configurations depending on the need to control turn-on delay, slew rate, and bleed resistance. Default values of each parameter are built into the part without the requirement of external components. This configuration is shown above in Figure 1.

Figures 22 and 23 show alternate configurations where external components are used to modify the turn-on delay, slew rate, and total bleed resistance.

Figure 22 shows an external capacitor,  $C_{COMBO}$ , connected from the  $V_{OUT}$  pin to both the DELAY and SR pins. This allows for one external capacitor to be used to modify the turn-on delay and slew rate. Note that the value of  $C_{COMBO}$  is used in Equations 1 and 2 (below) in place of  $C_{DEL}$  and  $C_{SR}$  respectively.

Figure 23 shows the use of two external capacitors for independent control of the turn-on delay and slew rate.

**SLEW RATE AND TURN-ON DELAY**

Parameter	Conditions	Symbol	Min	Typ	Max	Unit
Turn-on Delay Constant		$K_{DEL}$		1.77		MΩ
External Delay Capacitance (Note 13)	Between DEL pin and GND	$C_{DEL}$			10	nF
Slew Rate Constant		$K_{SR}$		1.42		μA
External Slew Rate Capacitance (Note 13)	Between SR pin and $V_{OUT}$ pin	$C_{SR}$			2	nF
Internal Slew Rate Capacitance		$C_{CHIP}$		150		pF
External Combo Capacitance (Note 13)	Between SR & DEL pins and $V_{OUT}$ pin	$C_{COMBO}$			2	nF

13. Recommended range, larger values may be used but may degrade the performance of the part

**Turn-On Delay**

The NCP4545 provides a time delay between the input transition on EN to the MOSFET turning on. The turn-on delay can be increased with an external capacitor added between the DELAY pin and either ground or the  $V_{OUT}$  pin as shown in Figures 22 and 23.

The total delay is calculated by adding the default turn-on delay to a delta term which is calculated as follows:

$$\Delta t = K_{DEL} * C_{DEL} \quad (\text{eq. 1})$$

where  $K_{DEL}$  is a constant and  $C_{DEL}$  is the off-chip capacitance added between the DELAY pin to either ground or the  $V_{OUT}$  pin (see table below). When no external capacitor is present, the delay will be the specified default turn-on delay.

**Slew Rate Control**

The NCP4545 is equipped with controlled output slew rate which provides soft start functionality. This limits the inrush current caused by capacitor charging and enables this device to be used in hot swapping applications. The slew rate can be decreased with an external capacitor added between the SR pin and the  $V_{OUT}$  pin as shown in Figures 22 and 23.

The slew rate can be calculated as follows:

$$SR = \frac{K_{SR}}{C_{SR} + C_{CHIP}} \quad (\text{eq. 2})$$

where  $K_{SR}$  is a constant,  $C_{SR}$  is the off-chip capacitance added between the SR pin and the  $V_{OUT}$  pin, and  $C_{CHIP}$  is the on-chip capacitance (see table below). Note that this equation is only valid for  $C_{SR} \geq 470$  pF. When no external capacitor is present, the slew rate will be the specified default slew rate.

**Load Bleed**

The NCP4545 has an on-chip bleed resistor that can be used to bleed the charge off of the load to ground after the MOSFET has been disabled. In series with the bleed resistor is a bleed switch which is enabled whenever the MOSFET is disabled. Delays are added to the enable of this switch to ensure that both the MOSFET and the bleed switch are not concurrently active. The total bleed resistance can be increased by adding a resistor between the BLEED pin and the  $V_{OUT}$  pin as shown in Figures 22 and 23. If the load bleed function is not desired, the BLEED pin should be tied to ground or left floating.

## NCP4545

Figure 22. Example Application – External bleed resistor with single-capacitor adjustment of turn-on delay and slew rate.

Figure 23. Example Application – External bleed resistor with independent adjustment of turn-on delay and slew rate.
