Flammability Information Solder

All materials present in the power module meet UL flammability rating class 94V-0.

Compliance to RoHS Directives

The power module is 100% lead free and RoHS compliant 2000/53/C directive.

Solder

Solder used is a lead free SnAgCu alloy.

Base of the leads, at the interface with the package body should not be exposed to more than 200°C during mounting on the PCB, this to prevent the remelt of the solder joints.

ABSOLUTE MAXIMUM RATINGS ($T_J = 25^\circ\text{C}$ unless otherwise noted)

Symbol	Parameter	Max	Unit
VDS(Q1~Q4)	Drain to Source Voltage	80	V
VGS(Q1~Q4)	Gate to Source Voltage	± 20	V
EAS(Q1~Q4)	Single Pulse Avalanche Energy (Note 1)	2,445	mJ
T_J	Maximum Junction Temperature	175	$^\circ\text{C}$
T_{STG}	Storage Temperature	125	$^\circ\text{C}$

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

1. Starting $T_J = 25^\circ\text{C}$, $L = 0.47\text{ mH}$, $I_{AS} = 102\text{ A}$, $V_{DD} = 72\text{ V}$ during inductor charging and $V_{DD} = 0\text{ V}$ during time in avalanche.

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

2. All bare die MOSFETs have same die size and same level of Rdson value. However the different Rdson values listed in the datasheet are due to the different access points available inside the module for Rdson measurement. In this reason, the actual FET RDS(ON) is not able to be measured. For the Pure FET Rdson for power loss calculation, the Rdson measurement with Kelvin pin from NXV08H400XT1 can be used. Each Rdson measurement paths are as below table, "Resistance Measurement Methods"
