### EVAL BOARD USER'S MANUAL

#### INTRODUCTION

This document describes the NCV7429 evaluation board for the ON Semiconductor NCV7429 System basis chip with a LIN transceiver, 5 V LDO, LS and HS switches. The functionality and major parameters can be evaluated using the NCV7429 evaluation board.

The NCV7429 is a monolithic LIN System-Basis-Chip with enhanced feature set useful in Automotive Body Control systems. Besides the LIN bus interface the IC features a 5 V voltage regulator, high-side and low-side switches to control LEDs and relays, and supervision functionality like a window watchdog. This allows a highly integrated solution by replacing external discrete components while maintaining the system flexibility. As a consequence, the board space and ECU weight can be minimized.

#### EVALUATION BOARD FEATURES

- One-row pin header, providing the circuit signals, enables easy insertion of the evaluation board into a more complex application setup
- Oscilloscope test-points on all important signals
- Reverse protection and decoupling on the main (battery) supply
- Split supply paths for VS and VS\_OUT device supply pins
- Decoupling on VR1 low-drop regulator output
- Additional pull-up resistors on the open-drain digital output NRES
- Filtering circuit on the switch-monitoring WU input
- On-board Local Wakeup switch
- Indication LEDs on NRES and FSO signals

Figure 1. NCV7429V1GEVB  
Evaluation Board

- Master / Slave LIN-bus termination
- Good thermal connection of the circuit's exposed pad to the bottom ground plane
- Basic standalone functionality using Software Development Mode

**Table 1. ABSOLUTE MAXIMUM RATINGS**

| Rating   | Pins                                       | Min  | Max                | Unit |
|--|--|------|--------------------|------|
| Supply voltage   | Vbat                                       | -40  | 40                 | V    |
| VR1 regulator output voltage                           | VR1  | -0.3 | 5.5                | V    |
| VR1 regulator output current                           | VR1  | 0    | internally limited | mA   |
| Digital inputs/outputs voltage                         | NRES, CSN, SCLK, SDI, SDO, TxDL, RxDL/INTN | -0.3 | VR1+0.3            | V    |
| SWDM pin input voltage                                 | SWDM                                       | -0.3 | 40                 |      |
| LIN bus line voltage                                   | LIN  | -40  | 40                 | V    |
| Wake-up input voltage                                  | WU   | -0.3 | Vbat               | V    |
| HS outputs voltage                                     | OUT1-3                                     | -0.3 | Vbat               | V    |
| HS outputs current (from pin)                          | OUT1-3                                     | 0    | internally limited | mA   |
| LS outputs voltage (limited internally during flyback) | LS1/2                                      | -0.3 | 40                 | V    |
| LS outputs current                                     | LS1/2                                      | -120 | Internally limited | mA   |
| NCV7429 junction temperature                           |  | -40  | +170               | °C   |
| Board temperature                                      |  | -40  | +125               | °C   |

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

**Table 2. RECOMMENDED BOARD OPERATING CONDITIONS**

| Rating   | Pins                                       | Min  | Max  | Unit |
|--|--|------|------|------|
| Supply voltage   | Vbat                                       | 0    | 28   | V    |
| VR1 regulator output voltage                           | VR1  | 4.9  | 5.1  | V    |
| VR1 regulator output current                           | VR1  | 0    | 150  | mA   |
| Digital inputs/outputs voltage                         | NRES, CSN, SCLK, SDI, SDO, TxDL, RxDL/INTN | 0    | VR1  | V    |
| SWDM pin input voltage                                 | SWDM                                       | -0.3 | 28   |      |
| LIN bus line voltage                                   | LIN  | 0    | Vbat | V    |
| Wake-up input voltage                                  | WU   | 0    | Vbat | V    |
| HS outputs voltage                                     | OUT1-3                                     | 0    | Vbat | V    |
| HS outputs current (from pin)                          | OUT1-3                                     | 0    | 140  | mA   |
| LS outputs voltage (limited internally during flyback) | LS1/2                                      | 0    | Vbat | V    |
| LS outputs current                                     | LS1/2                                      | 0    | 200  | mA   |
| NCV7429 junction temperature                           |  | -40  | +150 | °C   |
| Board temperature                                      |  | -40  | +105 | °C   |

# NCV7429V1GEVB

## OPERATIONAL GUIDELINES

NCV7429 is a complex SCB device, which needs external MCU, connected through J1 connector, to control all functions and settings. However NCV7429 may work in so called Software Development Mode (SWDM), where watchdog services are not needed. To configure NCV7429 into this mode, SWDM pin has to be tight to a voltage source

of at least 10 V during start-up or while SWDM pin sampling is requested via SPI. Connection to VS is not recommended as the voltage ramp-up may be limited, which could lead to incorrect SWDM state sampling. Two on-board LEDs indicate faulty states of the board, as described in Table 4.

**Table 3. SOLDERING STRAPS FUNCTIONS**

| Jumper | Position                   | Function  |
|--------|----------------------------|---|
| J_SWDM | "-" or not connected (GND) | Normal operation mode with external MCU connected (Watchdog service needed)<br>OR<br>SWDM supplied from an external power supply.   |
|        | "+" (VS)                   | Software Development Mode (Watchdog does not need to be served)<br>In case of slow ramp-up of the Vbat voltage, SWDM may be incorrectly sampled<br>Therefore an external voltage source on SWDM pin is recommended. |
| J_FSO  |                            | LED connection to OUT3/FSO  |

**Table 4. LED FUNCTIONS**

| Jumper   | Function   |
|----------|--|
| LED_NRES | Indicates activation of RSTN pin due to the following reasons: <ul style="list-style-type: none"> <li>Sleep/Fail-safe mode (LED_NRES off due to missing VR1 supply)</li> <li>Reset mode (2 ms on)</li> </ul> |
| LED_FSO  | OUT3/FSO pin active due to failure condition: <ul style="list-style-type: none"> <li>Fatal VR1 failure</li> <li>Watchdog failure (ignored if SWDM is High)</li> <li>Thermal Shutdown</li> </ul>              |

**Figure 3. NCV7429 Evaluation Board Description**

# NCV7429V1GEVB

## External Board Connections

For basic evaluations without watchdog services, the board may operate in the Software Development Mode (Figure 4). If the Vbat supply source does not provide fast

**Figure 5. Example of NCV7429 Full Evaluation Setup**

## FUNCTIONAL DESCRIPTION

## Vbat Supply Input

VS and VS\_OUT pins of NCV7429 are typically connected to the car battery through reverse-protection diodes and can be exposed to all relevant automotive disturbances (ISO7637 pulses, system ESD ...). VS supplies mainly the control logic and integrated LIN transceiver, while VS\_OUT supplies LS1/2 low-side drivers, OUT1–3 high-side drivers and WU wakeup circuitry. The evaluation boards provides split VS and VS\_OUT into individual supply paths, which helps covering battery line drop-outs, when the outputs functionality can be affected by the under-voltage, but the MCU has to be still running.

## VR1 Low-drop Regulator

An integrated low-drop regulator provides a 5 V supply VR1 to external loads, typically microcontroller.

VR1 voltage level is monitored by an under-voltage detector with multiple thresholds:

- Comparison with SPI-selectable threshold *VR1\_RESx*. By default, the highest threshold (typ. 4.5 V) applies for the state machine control and the activation of the NRES signal (LED\_NRES on).
- VR1 is compared with a fixed threshold *Vfail\_VR1* (typ. 2 V). If VR1 stays below *Vfail\_VR1* level for longer than *Tshort\_VR1* (typ. 40 ms) in the Init phase, a VR1 short-circuit is detected, SPI flag VR1\_FAIL is set and Fail-safe mode entered (OUT3/FSO on, if enabled). In other modes with VR1 active, any under-voltage longer than *Tfail\_VR1* is flagged into VR1\_FAIL, but the Fail-safe mode is not entered.

startup (C1 and C2 capacitors have to be charged), the Software Development mode may not be entered properly. In this case, external power supply ( $> 10\text{ V}$ ) for SWDM input is preferred.

## LIN Transceiver

The NCV7429 on-chip LIN transceiver is an interface between a physical LIN bus and the LIN protocol controller. It is compatible to LIN2.x and J2602 specifications. The LIN is supplied solely from the VS pin and its state linked to the device operating states controlled via SPI. The LIN transceiver is enabled in the Software Development mode.

## High-Side Drivers

High-side drivers OUT1-OUT3 are designed to supply mainly LED's or switches (for cyclic monitoring).

In the Normal mode, they can be set to one of the following states via the corresponding SPI bits:

- Driver is off in all modes (default)
- Driver is on in all modes, except Fail-safe mode
- Driver is activated periodically in all modes, except Fail-safe mode. Periodical activation can be used, for example, for LED flashing or cyclic contact monitoring
- Driver is controlled by the on-chip PWM controller in all modes, except Fail-safe mode

All OUTx outputs are protected by the following features:

- Over-current protection and current limitation
- Under-load detection
- Thermal protection
- VS\_OUT under-/over-voltage protection

Ceramic capacitors (C11–13) on the outputs are recommended in case the drivers supply external loads. They improve EMC and ESD performance of the drivers.

# NCV7429V1GEVB

## Low-Side Drivers

NCV7429 offers two low-side drivers LS1 and LS2 primarily intended to drive relays.

For the relay demagnetization, LS1/2 drivers feature active flyback clamps towards ground (no diode to VS\_OUT) allowing to keep the load off even under a load-dump condition on VS\_OUT. Alternatively, LS1/2 can drive LED's or other loads.

Ceramic capacitors (C14/15) on the outputs are recommended in case the drivers supply external loads. They improve EMC and ESD performance of the drivers.

LS1/2 can be configured in one of the following states:

- Off in all modes (default)
- On in the Normal mode; off in all other modes
- Controlled by individual PWM in the Normal mode; off in all other modes. If a relay is connected to the output, this setting should not be used.

LS1/2 outputs are protected by the following features:

- Over-current protection and current limitation
- Thermal protection
- VS\_OUT under-/over-voltage protection

## Operating Status

NCV7429 provides four basic static operating modes and additional transition states – see NCV7429 datasheet available at [www.onsemi.com](http://www.onsemi.com).

For initial evaluation, a Software Development Mode can be entered. This mode equals to a Normal mode (VR1 and LIN enabled by default) while the only difference is that the watchdog does not need to be served. The Software Development mode is entered, if SWDM pin is high (typ. Above 8.5 V) after a power-up (in Init phase) or SWDM pin sampling is requested via SPI.

This literature is subject to all applicable copyright laws and is not for resale in any manner.

The evaluation board/kit (research and development board/kit) (hereinafter the "board") is not a finished product and is not available for sale to consumers. The board is only intended for research, development, demonstration and evaluation purposes and will only be used in laboratory/development areas by persons with an engineering/technical training and familiar with the risks associated with handling electrical/mechanical components, systems and subsystems. This person assumes full responsibility/liability for proper and safe handling. Any other use, resale or redistribution for any other purpose is strictly prohibited.

**THE BOARD IS PROVIDED BY ONSEMI TO YOU "AS IS" AND WITHOUT ANY REPRESENTATIONS OR WARRANTIES WHATSOEVER. WITHOUT LIMITING THE FOREGOING, ONSEMI (AND ITS LICENSORS/SUPPLIERS) HEREBY DISCLAIMS ANY AND ALL REPRESENTATIONS AND WARRANTIES IN RELATION TO THE BOARD, ANY MODIFICATIONS, OR THIS AGREEMENT, WHETHER EXPRESS, IMPLIED, STATUTORY OR OTHERWISE, INCLUDING WITHOUT LIMITATION ANY AND ALL REPRESENTATIONS AND WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, AND THOSE ARISING FROM A COURSE OF DEALING, TRADE USAGE, TRADE CUSTOM OR TRADE PRACTICE.**

**onsemi** reserves the right to make changes without further notice to any board.

You are responsible for determining whether the board will be suitable for your intended use or application or will achieve your intended results. Prior to using or distributing any systems that have been evaluated, designed or tested using the board, you agree to test and validate your design to confirm the functionality for your application. Any technical, applications or design information or advice, quality characterization, reliability data or other services provided by **onsemi** shall not constitute any representation or warranty by **onsemi**, and no additional obligations or liabilities shall arise from **onsemi** having provided such information or services.

**onsemi** products including the boards are not designed, intended, or authorized for use in life support systems, or any FDA Class 3 medical devices or medical devices with a similar or equivalent classification in a foreign jurisdiction, or any devices intended for implantation in the human body. You agree to indemnify, defend and hold harmless **onsemi**, its directors, officers, employees, representatives, agents, subsidiaries, affiliates, distributors, and assigns, against any and all liabilities, losses, costs, damages, judgments, and expenses, arising out of any claim, demand, investigation, lawsuit, regulatory action or cause of action arising out of or associated with any unauthorized use, even if such claim alleges that **onsemi** was negligent regarding the design or manufacture of any products and/or the board.

This evaluation board/kit does not fall within the scope of the European Union directives regarding electromagnetic compatibility, restricted substances (RoHS), recycling (WEEE), FCC, CE or UL, and may not meet the technical requirements of these or other related directives.

**FCC WARNING** – This evaluation board/kit is intended for use for engineering development, demonstration, or evaluation purposes only and is not considered by **onsemi** to be a finished end product fit for general consumer use. It may generate, use, or radiate radio frequency energy and has not been tested for compliance with the limits of computing devices pursuant to part 15 of FCC rules, which are designed to provide reasonable protection against radio frequency interference. Operation of this equipment may cause interference with radio communications, in which case the user shall be responsible, at its expense, to take whatever measures may be required to correct this interference.

**onsemi** does not convey any license under its patent rights nor the rights of others.

**LIMITATIONS OF LIABILITY:** **onsemi** shall not be liable for any special, consequential, incidental, indirect or punitive damages, including, but not limited to the costs of requalification, delay, loss of profits or goodwill, arising out of or in connection with the board, even if **onsemi** is advised of the possibility of such damages. In no event shall **onsemi**'s aggregate liability from any obligation arising out of or in connection with the board, under any theory of liability, exceed the purchase price paid for the board, if any.

The board is provided to you subject to the license and other terms per **onsemi**'s standard terms and conditions of sale. For more information and documentation, please visit [www.onsemi.com](http://www.onsemi.com).
