Table of Contents

This user guide supports the evaluation kit for the FL77944. It should be used in conjunction with the FL77944 datasheet as well as Fairchild's application notes and technical support team. Please visit Fairchild's website at www.fairchildsemi.com.

1. Introduction

This document describes a direct AC line LED driver with a minimal number of external components. The input voltage range of the LED driver board is classed as high-line application for 198 V_{AC} ~ 242 $V_{AC,}$ with a single DC output, constant current depends on the Rcs value. This document contains a general description of the FL77944, the normal configuration specification, schematic, bill of materials, and typical operating characteristics.

1.1. General Description of FL77944MX

The FL77944 is a direct AC line LED driver with a minimal number of external RC passive components. In normal configuration, one resistor is to adjust LED power, and one capacitor is to provide a stable voltage to an internal biasing shunt regulator.

The FL77944 provides phase-cut dimming with wide dimming range, smooth dimming control and good dimmer compatibility. It achieves the high efficiency with high PF and low THD which makes the FL77944 suitable for high-efficiency LED lighting systems. The FL77944 has dedicated DIM pin which can be used with analog or digital PWM dimming. The FL77944 can also be used with a rheostat dimmer switch which is suitable for desktop or indoor lamps.

High wattage design of the FL77904 can be implemented with multiple IC embedded in parallel for street lighting and down lighting applications.

1.2. Controller Features

- The simplest Direct AC LED Driver with Only Two External RC Passive Component
- Wide AC Input Range : 90~305 V_{AC}
- Four Integrated High-Voltage LED Constant Current Sinks of up to 150 mA (RMS) Capability
- TRIAC Dimmable (Leading/Trailing Edge)
- Rheostat Dimmable
- Analog/digital PWM Dimming Function
- High Power Factor (above 0.98 in normal configuration)
- Adjustable LED Power with an External Current Sense Resistor
- Low Harmonic Content (THD under 20% in normal configuration)
- SOP16 EP Package
- Flexible LED Forward Voltage Configuration
- Power Scalability with Multiple Driver ICs
- Over Temperature Protection (OTP)

6. High-Line without SVF Evaluation Board

6.1. Evaluation Board Schematic

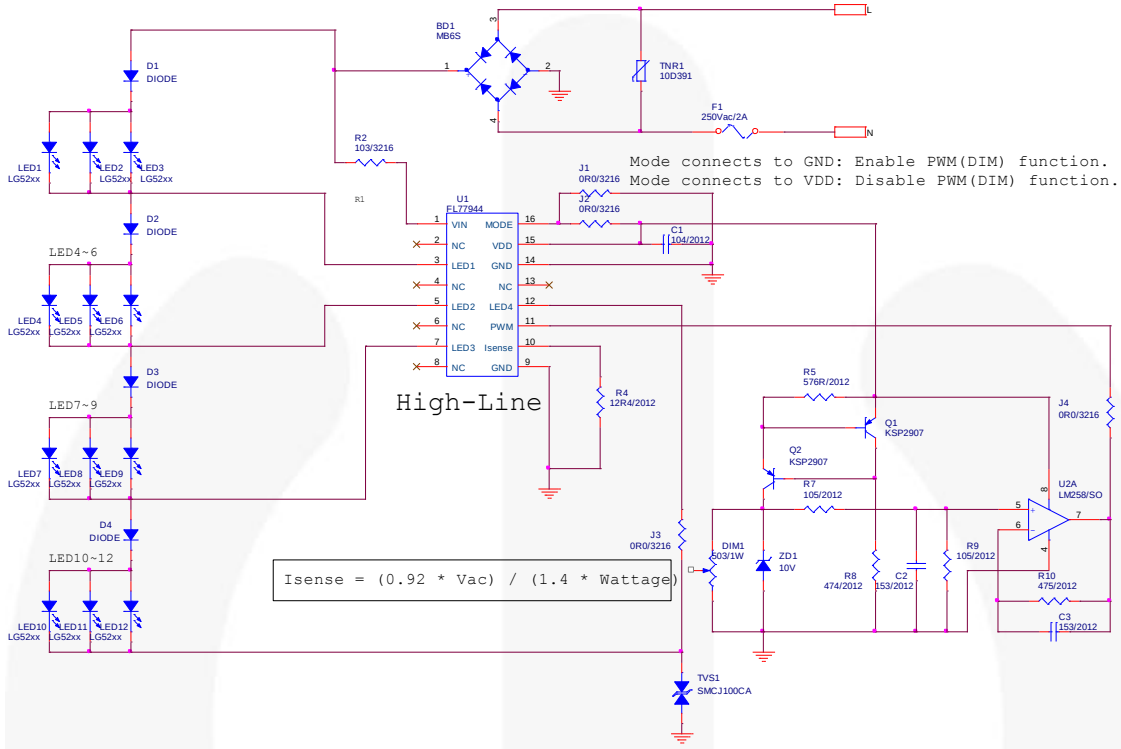

Figure 2. Typical Application Circuit of the 12 W Down Light for High-Line without SVF Condition

Note:

1. The diode D1, D2, D3, D4 can be removed for the without SVF application.

Table 4. **Evaluation Board Circuit Parameters for High-Line without SVF**

Parameter		Value			Unit
Evaluation Board #		FEBFL77944_L80H012A			-
Input Voltage		198 ~ 242			V_{AC}
Output Power		12			W
LED					
CCT	If(mA)	Vf(V)	Power(W)	Φv(lm)	Lm/W
5700K(G)	20 (Typ.)	65.4	1.31	167	127
Option					
Dimming		0 V – 10 V			
Dimmer		SF 10p-W by Cooper Wiring Devices			

6.2. Key Performance Measurements

Table 5. **Key Performance Measurements for High-Line without SVF**

Input Condition	50 Hz			60 Hz		
	198 V_{AC}	220 V_{AC}	242 V_{AC}	198 V_{AC}	220 V_{AC}	242 V_{AC}
Power Factor	0.98	0.99	0.99	0.98	0.99	0.99
THD (%)	14.32	11.91	11.54	14.33	11.91	11.53
Pin (W)	10.20	12.40	14.40	10.30	12.50	14.40
IIN.RMS (A)	0.052	0.056	0.060	0.052	0.057	0.060
Lumen (lm)	970.03	1117.03	1196.52	956.63	1110.15	1197.55
Efficacy(lm/W)	95.10	90.08	83.09	93.75	88.81	83.16
Flicker Index	0.359	0.339	0.312	0.377	0.359	0.332

Note:
2. Lumen (lm) : Measured after one minute by initial turn-on * 0.955 (temperature saturation factor).

Table 5 shows the key performance measurements for high-line without Self Valley Fill (SVF) condition according to the input voltage (min: 198 V_{AC}, typical: 220 V_{AC}, max: 242 V_{AC}) and 50 Hz / 60 Hz. Power factor is higher than 0.98 at the input voltage range from 198 to 242 Vac. THD is reduced by an increased input voltage. THD is reduced by an increased input voltage. However the efficacy is decreased by increasing the input voltage. The input power rate should be larger than the rise of the lumen.

6.3. Startup

Table 6. **Startup Waveform According to Variable Input Voltage and Frequency**

	198 V_{AC}	220 V_{AC}	242 V_{AC}
50 Hz			60 Hz			
Figure 3. Ch1: VDD 10.0 V/div, Ch2: $V_{IN.ac}$ 100 V/div, Ch3: $I_{IN.ac}$ 50.0 mA/div

Table 6 shows the overall startup performance of low-line without SVF evaluation board at the variable input voltage with 50 / 60 Hz when no dimmer is connected. The input current starts flowing at least 2 ms after the AC input power switch turns-on for all condition.

6.4. Normal Operation

Table 7. **Normal Operation Waveform According to Variable Input Voltage and Frequency**

	198 V_{AC}	220 V_{AC}	242 V_{AC}
50 Hz			60 Hz			
Figure 4. Ch2: $V_{IN.ac}$, 100 V/div, Ch4: $I_{IN.ac}$ 50.0 mA/div

Table 7 shows the normal operation waveform of high-line without SVF evaluation board at the variable input voltage with 50 / 60 Hz when no dimmer is connected. The condition of the LED 4 pin is turned on when the input voltage larger than at least all string LED forward voltage (67 V * 4 ea = 268 V). Also the conduction time of the LED 4 pin is depend on the input voltage.

6.5. Dimming Operation & Performance

Table 8. **Dimming Operation Waveform According to Variable Dimming Voltage**

	DIM: 1 V	DIM: 5 V	DIM: 9 V
50 Hz at 220 V_{AC}			60 Hz at 220 V_{AC}			
Figure 5. Ch2: $V_{IN.ac}$, 100 V/div, Ch4: $I_{IN.ac}$ 50.0 mA/div Dimmer: SF 10p-W by Cooper Wiring Devices

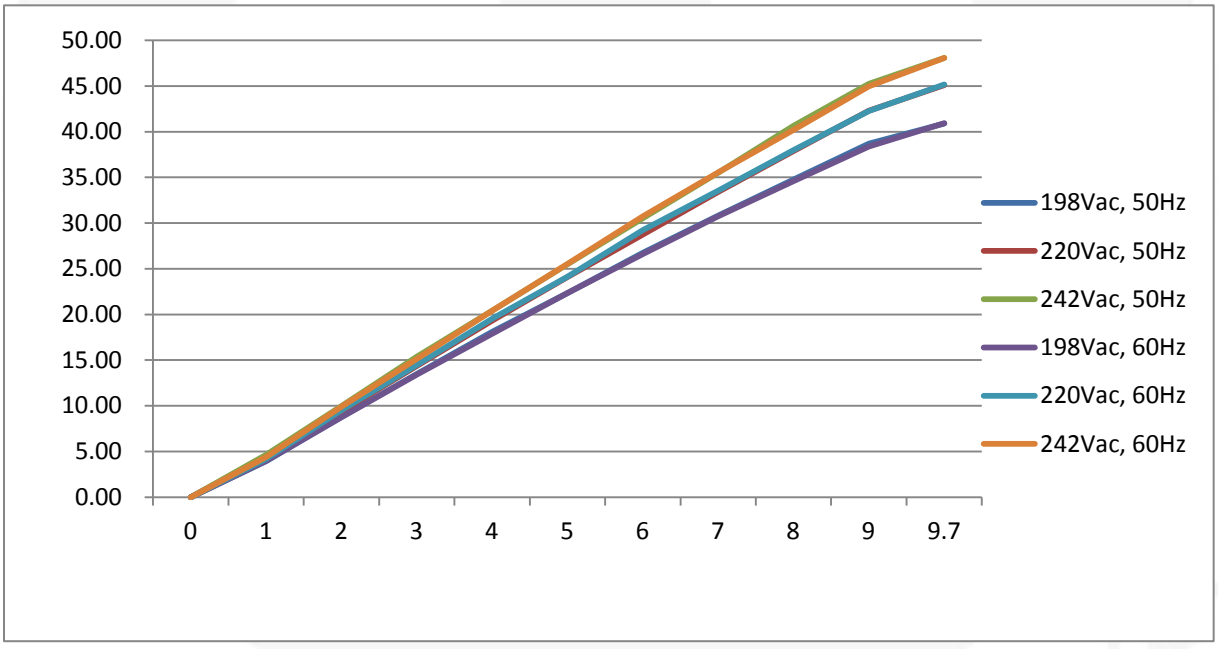

Figure 6. [High-Line w/o SVF] Dimming Performance: Output Current vs. Analog Dimming

The FL77944 analog dimming function can be implemented with a few external component.

The converter output current at the rated line voltage can be adjusted within the range of 8.2% to 100% of the nominal current value through 0 to 10 V A-DIM signal.

WARNING AND DISCLAIMER

Replace components on the Evaluation Board only with those parts shown on the parts list (or Bill of Materials) in the Users' Guide. Contact an authorized Fairchild representative with any questions.

The Evaluation board (or kit) is for demonstration purposes only and neither the Board nor this User's Guide constitute a sales contract or create any kind of warranty, whether express or implied, as to the applications or products involved. Fairchild warrantees that its products meet Fairchild's published specifications, but does not guarantee that its products work in any specific application. Fairchild reserves the right to make changes without notice to any products described herein to improve reliability, function, or design. Either the applicable sales contract signed by Fairchild and Buyer or, if no contract exists, Fairchild's standard Terms and Conditions on the back of Fairchild invoices, govern the terms of sale of the products described herein.

DISCLAIMER

FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TO MAKE CHANGES WITHOUT FURTHER NOTICE TO ANY PRODUCTS HEREIN TO IMPROVE RELIABILITY, FUNCTION, OR DESIGN. FAIRCHILD DOES NOT ASSUME ANY LIABILITY ARISING OUT OF THE APPLICATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS.

LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION.

As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, or (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

ANTI-COUNTERFEITING POLICY

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, www.fairchildsemi.com, under Sales Support.

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.
