

XGS 16000 Global Shutter CMOS Image Sensor

XGS Family

Description

The XGS CMOS image sensor family provides high resolution, high performance global shutter image capture. This is a 16 MP 1.1 inch resolution variant that is hardware compatible to the XGS 12000 and lower XGS resolutions. The 21.5 mm x 19.5 mm package makes this sensor particularly suited for integration in 29 mm x 29 mm camera formats. The high speed, 12-bit output maximally leverages interfaces such as USB 3.2, Thunderbolt™ 2 and 10 GigE.

Image data is read out through a column ADC architecture and then transferred over a HiSPi interface. On-chip logic, programmable via the serial interface, generates internal timing for integration and readout control. Up to three register configurations can be programmed and sequentially enabled (frame by frame) using a single command over the control interface.
