Utilizing the FSA2000 MUTE Function to Reduce Audio “Click” and “Pop”

Introduction

The FSA2000 was designed with special control pins to allow system designers to eliminate click and pop during situations when the FSA2000 audio amplifier is in use. This application note discusses the proper use and timing of the control pins to ensure that clicks and pops do not occur.

Power-Up and Power-Down

A common issue with headphone amplifiers is click and pop when the amplifier is powering-up or powering-down. There are sharp transients on the audio outputs that can cause audible click and pop noises through the headset. The

FSA2000 prevents these transients during power-up by muting the outputs until the internal charge pumps are stable. This ensures that any transients caused by the charge pump are not propagated to the outputs. In the cases where the application needs a longer startup time for mute, the FSA2000 has the MUTE pin to allow applications control over the behavior of the amplifier during both startup and power-down. The MUTE pin forces the audio outputs into a known and controlled state so that any transients of the amplifier are not propagated to the headphones. Figure 1 shows the correct timing of the MUTE pin in relation to the /SHDN pin for optimal click and pop performance.

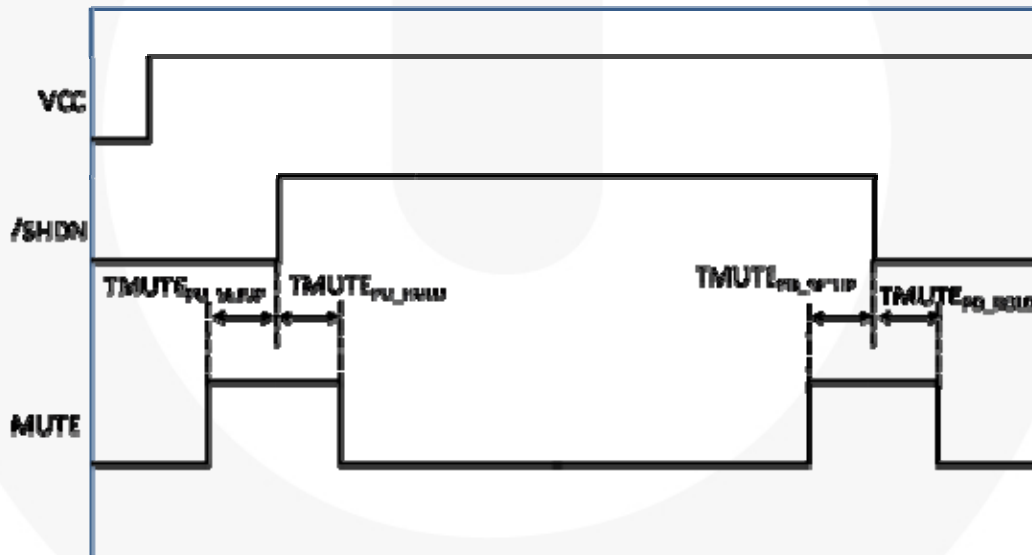

Figure 1. Power-Up and Power-Down Timing

Table 1. Recommended MUTE Timing

Parameter	Description	Recommended Timing
TMUTE _{PU_SETUP}	MUTE Setup Time to /SHDN Rising Edge	500ns
TMUTE _{PU_HOLD}	MUTE Hold Time to /SHDN Rising Edge	500ns
TMUTE _{PD_SETUP}	MUTE Setup Time to /SHDN Falling Edge	500ns
TMUTE _{PD_HOLD}	MUTE Hold Time to /SHDN Falling Edge	500ns

DISCLAIMER

FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TO MAKE CHANGES WITHOUT FURTHER NOTICE TO ANY PRODUCTS HEREIN TO IMPROVE RELIABILITY, FUNCTION, OR DESIGN. FAIRCHILD DOES NOT ASSUME ANY LIABILITY ARISING OUT OF THE APPLICATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS.

LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION.

As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, or (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
