Introduction

The Strata Enabled eFuse EVB provides an easy to use evaluation kit within the Strata Development Environment for different eFuses from ON Semiconductor. Through Strata, the developer can access datasheets, BOMs, schematics, and other collateral they may need. This document will provide instructions on how to use the evaluation kits.

Features

- Vin Range from 9.2V to 18V
- 2 independently controlled eFuses that can be placed in parallel
- Multiple overload current options
- Programmable slew rate

Applications

- Hard Drives
- Servers
- Motherboards
- Fan Drives

User Guide

This section will explain how to use the Strata Enabled eFuse EVB in a step by step manner, and will cover the hardware required, how to use the User Interface in Strata, and the controls specific to the eFuse.

Hardware Setup

The hardware required to use the Strata Enabled eFuse EVB are a computer (with Windows), a power supply, and a load. Follow the steps below.

1. Plug the power supply into the input of the eFuse board using the banana plugs J20 and J21. Do not apply over 18V to the input. The minimal amount of voltage needed for the eFuse to turn on is 9.2V.
2. Connect the computer to the eFuse board using the USB connector J25 on the bottom of the board.
3. Plug the load into the output using the banana plugs J19 and J23.

An example picture of the setup can be found below.

User Interface

The UI within the Strata app will allow the user to control the eFuse and monitor its telemetry without needing other lab equipment or training to do so. The steps below cover what is in the UI.

1. First, open the Strata app. Login and the home screen will appear.

- The app will automatically detect the device that is plugged in and will bring up the UI for the board that is plugged in.

- The view that comes up is the basic view for the eFuse, which offers basic telemetry and an enable switch for each eFuse.
- In the top right hand corner the user can switch to the Advanced view which is shown below. The Advanced view offers a programmable slew rate, and short circuit enable to the user in addition to the controls and telemetry from the basic view.

- The round button with a question mark in the top right corner of the screen is the help button, which will give the user a description of what everything on the UI is doing.
- To view the collateral provided with the EVB, click on the “Platform Content” tab at the top of the screen.

eFuse Controls and Functionality

This section will go over the specific controls in the UI for the eFuse.

- Slew Rate** – This sets the slew rate of the output voltage for the eFuse on start up.
- Short Circuit EN** – This will enable the on board short circuit load that shorts the output to GND in order to test the short circuit protection of the eFuse.
- Thermal Shutdown** – In the event of a thermal shutdown the eFuse will turn off and a popup window will appear in the UI. This will show which eFuse had the thermal interrupt, and will disable the eFuse and load when the reset button is pressed.

ON Semiconductor and the ON Semiconductor logo are trademarks of Semiconductor Components Industries, LLC dba ON Semiconductor or its subsidiaries in the United States and/or other countries. ON Semiconductor owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of ON Semiconductor's product/patent coverage may be accessed at www.onsemi.com/site/pdf/Patent-Marking.pdf. ON Semiconductor is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.

The evaluation board/kit (research and development board/kit) (hereinafter the "board") is not a finished product and is as such not available for sale to consumers. The board is only intended for research, development, demonstration and evaluation purposes and should as such only be used in laboratory/development areas by persons with an engineering/technical training and familiar with the risks associated with handling electrical/mechanical components, systems and subsystems. This person assumes full responsibility/liability for proper and safe handling. Any other use, resale or redistribution for any other purpose is strictly prohibited.

The board is delivered "AS IS" and without warranty of any kind including, but not limited to, that the board is production-worthy, that the functions contained in the board will meet your requirements, or that the operation of the board will be uninterrupted or error free. ON Semiconductor expressly disclaims all warranties, express, implied or otherwise, including without limitation, warranties of fitness for a particular purpose and non-infringement of intellectual property rights.

ON Semiconductor reserves the right to make changes without further notice to any board.

You are responsible for determining whether the board will be suitable for your intended use or application or will achieve your intended results. Prior to using or distributing any systems that have been evaluated, designed or tested using the board, you agree to test and validate your design to confirm the functionality for your application. Any technical, applications or design information or advice, quality characterization, reliability data or other services provided by ON Semiconductor shall not constitute any representation or warranty by ON Semiconductor, and no additional obligations or liabilities shall arise from ON Semiconductor having provided such information or services.

The boards are not designed, intended, or authorized for use in life support systems, or any FDA Class 3 medical devices or medical devices with a similar or equivalent classification in a foreign jurisdiction, or any devices intended for implantation in the human body. Should you purchase or use the board for any such unintended or unauthorized application, you shall indemnify and hold ON Semiconductor and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that ON Semiconductor was negligent regarding the design or manufacture of the board.

This evaluation board/kit does not fall within the scope of the European Union directives regarding electromagnetic compatibility, restricted substances (RoHS), recycling (WEEE), FCC, CE or UL, and may not meet the technical requirements of these or other related directives.

FCC WARNING – This evaluation board/kit is intended for use for engineering development, demonstration, or evaluation purposes only and is not considered by ON Semiconductor to be a finished end product fit for general consumer use. It may generate, use, or radiate radio frequency energy and has not been tested for compliance with the limits of computing devices pursuant to part 15 of FCC rules, which are designed to provide reasonable protection against radio frequency interference. Operation of this equipment may cause interference with radio communications, in which case the user shall be responsible, at its expense, to take whatever measures may be required to correct this interference.

ON Semiconductor does not convey any license under its patent rights nor the rights of others.

LIMITATIONS OF LIABILITY: ON Semiconductor shall not be liable for any special, consequential, incidental, indirect or punitive damages, including, but not limited to the costs of requalification, delay, loss of profits or goodwill, arising out of or in connection with the board, even if ON Semiconductor is advised of the possibility of such damages. In no event shall ON Semiconductor's aggregate liability from any obligation arising out of or in connection with the board, under any theory of liability, exceed the purchase price paid for the board, if any.
